AMENDMENTS TO THE CLAIMS

This listing replaces all prior version and listing of claims in the application:

- 1. (Original) A fiber mat faced gypsum board made by
 - (1) contacting a gypsum slurry for forming a set gypsum core with
- (2) a non-coated side of a pre-coated fiber mat, wherein the fiber mat has a thickness of between 0.02 and 0.045 inch and has a coating on a side opposite the non-coated side, said coating comprising a combination of (i) a mineral pigment, (ii) an organic binder and optionally (iii) an inorganic binder, the coating extending from a surface of said side opposite into said fiber mat a distance between about 30 and 50 percent of said thickness and having a microporosity which allows air to flow through and water to evaporate through said pre-coated mat from the gypsum core during preparation of the board,
- (3) wherein the contacting causes said gypsum slurry to penetrate into the non-coated side and through interstices of the fiber mat to fill said interstices with gypsum and form a bond between said gypsum and said coating, and
- (4) allowing the gypsum slurry to harden to form said set gypsum core, wherein the set gypsum core in a region near the bond has at least 17 percent combined water.
- 2. (Original) The board of claim 1 wherein the organic binder is a hydrophobic, UV resistant polymer latex.
- 3. (Original) The board of claim 2 wherein said mat contains glass fibers nominally about 10 to 16 microns in diameter.
- 4. (Original) The board of claim 3 in which said mat, in the absence of said coating, has a basis weight of 1 to 3 pounds per 100 square feet.
 - 5. (Original) The board of claim 1 having a gypsum core density of 40 to 55 pounds per

cubic foot.

- 6. (Currently Amended) The board of claim 1 wherein the coating weighs about 30 to 100 pounds per 1000 square feet of mat and the microporosity of the coating as measured by the modified Gurley method is between 2 and 45 seconds.
- 7. (Currently Amended) The board of claim 6 wherein the mineral pigment comprises from about 75 to 99 weight percent of the coating, the inorganic binder comprises from about 0 to 20 weight percent of the coating and the organic binder comprises from about 1 to 17 weight percent of the coating and the microporosity of the coating as measured by the modified Gurley method is between 5 and 20 seconds.
- 8. (Original) The board of claim 7 wherein the organic binder is a hydrophobic, UV resistant polymer latex.
- 9. (Original) The board of claim 8 wherein the mineral pigment comprises from about 83 to 95 weight percent of the coating, the inorganic binder comprises from about 0 to 10 weight percent of the coating and the hydrophobic, UV resistant polymer latex binder comprises from about 1 to 12 weight percent of the coating.
- 10. (Original) The board of claim 9 wherein said coating was applied to a surface of the fiber mat as an aqueous coating composition and dried to form said pre-coated mat.
- 11. (Original) The board of claim 10 wherein said aqueous coating composition includes about 0.1 to about 5 wt. % of one or more additives selected from the group consisting of a thickener, dispersant, colorant, defoaming agent and preservator.
 - 12. (Original) The board of claim 11 in which said fiber mat, in the absence of said

coating, has a basis weight of 1 to 3 pounds per 100 square feet.

- 13. (Currently amended) The board of claim 10 wherein the <u>set gypsum core</u> contains a amount of said water-resistant additive is in an amount of at least about 0.2 wt. %.
- 14. (Original) The board of claim 13 wherein the amount of said water-resistant additive is about 0.3 to about 10 wt. %.
- 15. (Currently amended) The board of claim 14 wherein said <u>water resistant</u> additive is selected from the group consisting of a wax emulsion, a wax-asphalt emulsion, poly(vinyl alcohol), a polysiloxane, a siliconate and mixtures thereof.
- 16. (Original) The board of claim 8 wherein the hydrophobic, UV resistant polymer latex adhesive binder consists essentially of a (meth)acrylic or (meth)acrylate polymer or a (meth)acrylic or (meth)acrylate copolymer.
- 17. (Currently amended) The board of claim 16 wherein said <u>pre-coated fiber mat</u> one of the fibrous mats consists essentially of glass fibers and <u>wherein the set gypsum core of the fiber mat faced gypsum board is faced on an opposite side with another the other fibrous mat which consists essentially of a blend of glass fibers and synthetic fibers.</u>
- 18. (Original) The gypsum board of claim 2 wherein the mineral pigment comprises from about 75 to 99 weight percent of the coating, the inorganic adhesive binder comprises from about 0 to 20 weight percent of the coating and the hydrophobic, UV resistant polymer latex adhesive binder comprises from about 1 to 17 weight percent of the coating.
- 19. (Original) The gypsum board of claim 18 wherein the mineral pigment comprises from about 83 to 95 weight percent of the coating, the inorganic adhesive binder comprises from

about 0 to 10 weight percent of the coating and the hydrophobic, UV resistant polymer latex adhesive binder comprises from about 1 to 12 weight percent of the coating.

20. (Original) The gypsum board of claim 18, or 19 wherein the hydrophobic, UV resistant polymer latex adhesive binder of said combination consists essentially of a (meth)acrylic or (meth)acrylate polymer or a (meth)acrylate copolymer.
